Optical Probes

Sentry 450 Wireless Probe

The Sentry 450 wireless probe is designed to make life easier for the field meter technician. This probe will also save the USB port on the computer from typical excessive wear with a wired USB probe. The wireless probe can also save laptop computers from adverse weather by leaving the computer in the vehicle and only attaching the optical head to the meter.

The probe is compliant with the FCC Part 15 rules and is FCC approved. It has been tested up to 1300 feet under ideal conditions, but distance will vary depending on the line of sight and obstacles in its path.

Included with the Sentry 450 kit is a USB transceiver, Optical transceiver head, battery charger with cable and the necessary drivers for Windows XP and 7. A carrying case is included to carry all the parts.
