

## SAVE THE TREES

If you are doing an AMI project, consider using crates instead of boxes. 1,000,000 meters will save 3,000 + trees. Also saves on labor and avoids mistakes.

For decades electric utilities have been looking for an inexpensive and realistic method to move meters around their systems. Some utilities use aluminum cans or other plastic crates which are bulky and take up a lot of space when empty.

Vision Metering has developed a durable reusable meter crate which folds down to less than 3" and are stackable when full or collapsed. They can easily be stacked on a pallet or in a plastic gaylord container.

The meter crates can hold 4 mechanical or solid state singlephase or polyphase meters.. The same crate is used for all applications.

Dimensions: Collapsed 16" X 16" X 2 3/4"  
Expanded 16" X 16" X 7 3/4"  
Weight 3.8 Lbs
