

The Sentry 950 is the next generation of a successful line of Sentry Handhelds for the shop and field. Previous Sentry Handhelds were only capable of reading ITRON Standard 8 digit SCM ERT™ messages. The Sentry 950 is vastly improved and can read the 8 Digit ERT's, the new ITRON 10 digit SCM+ , IDM, and Vision's Data on Demand. It automatically displays any radio it is reading. The reading range for High Power Radios is approximately 15-20 Feet away from the meter.

With a touch screen and key pad the Sentry 950 provides for two methods of command input. There is a 12 button keyboard allowing for manual entry of notes and meter readings. It can capture and store thousands of readings which can be downloaded through the mini USB port directly to a computer using the Sentry 950 Software package. Or alternatively all information can be displayed on the screen.

Unlike its predecessor, the Sentry 950 uses a rechargeable Lithium ION battery which will last more than 9 hours of continuous use. We also sale the replacement batteries for \$25.00 ea. The mini USB port is used for recharging the battery and downloading of stored information. Like the previous versions there are 4 colors of covers to suit anyone's liking. All Sentry 950 come with 1 year warranty .

**Dimensions 8.25" Long, 2.25" at the base
3.75" at the head and 1.25" thick**
